

Versatrac brochure, Jay Cross, 1991

Tracking the
whereabouts
of important
documents...

... can be most
trying.

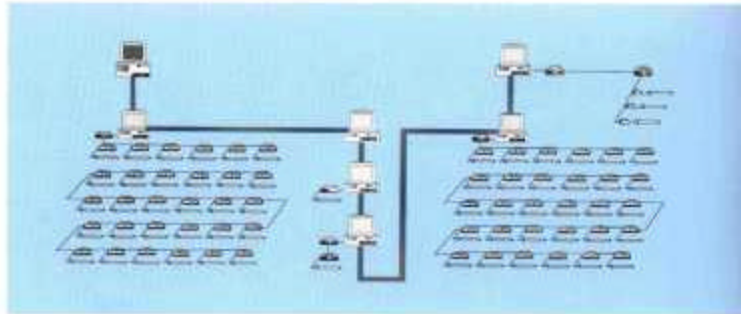

Versatrac
makes it
elementary.

Find any document, anywhere, any time.

Grows with your organization

The same system that serves an individual can grow to serve thousands.

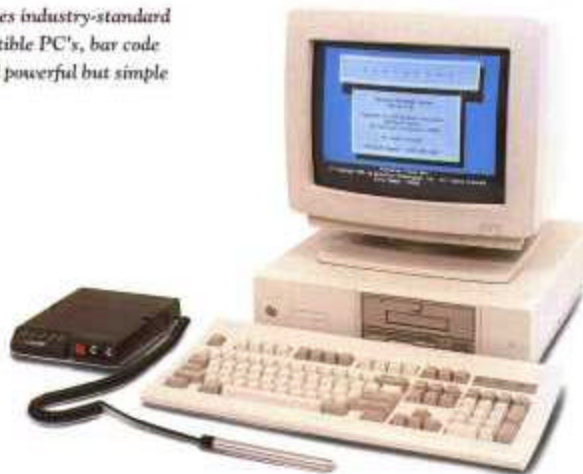

Versatrac lets a single PC serve more than 300 on-line bar code scanners. It also shares information with mini- and main-frame computers. Versatrac's advanced technology easily handles the demands of your business—whether you work with thousands of files or with millions.

Versatrac can grow from a single PC with one bar code scanner to a network like this one, supporting hundreds of on-line scanners and workstations.

Versatrac uses industry-standard IBM-compatible PC's, bar code readers, and powerful but simple software.

Designed by users

In 1984, the Versatrac team's business couldn't keep up with its paperwork. Six staffers searched full time for missing files. Customers waited hours for responses to their questions. Paperwork problems kept us from functioning—and from growing.

We developed Versatrac to solve our internal problems. It worked. We regained control of our paperwork. This year we will process more than 150,000 files—some ten million pieces of paper.

At last! Simple, fast, real-time control over your active documents and files. Versatrac.

Versatrac monitors information in motion. You know where things are when you need them, whether you work with hundreds, thousands, or millions of documents. Use Versatrac to find files fast, eliminate delays, and improve the quality of your service.

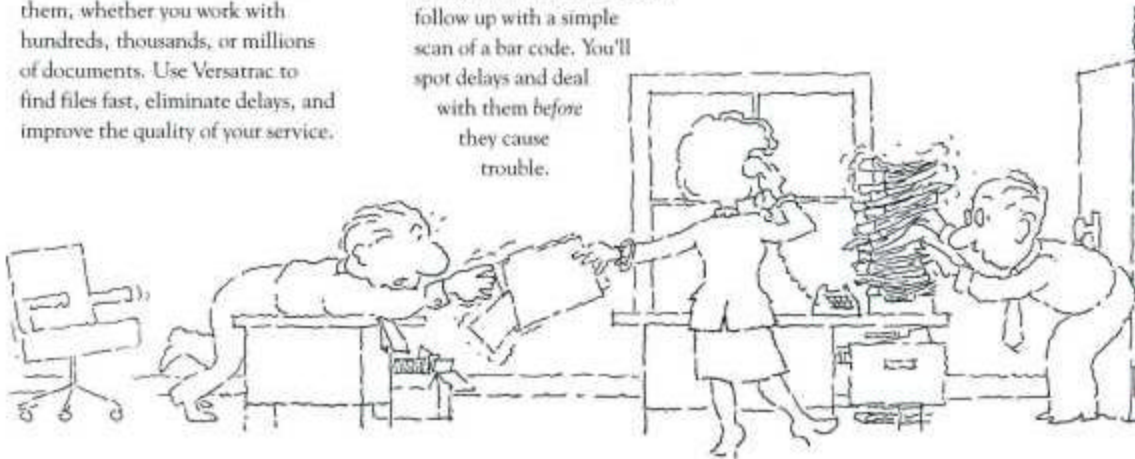

Easy to use

Putting Versatrac to work is simple. Its intuitive structure makes it easy to learn. Its user-friendly design means it's a snap to use. And its bar code scanners are so simple to use that you'll be able to track information without changing the way you do business.

You and your staff can master the system in minutes. Then you'll be able to track many types of items and to schedule files for follow up with a simple scan of a bar code. You'll spot delays and deal with them *before* they cause trouble.

It's easy. A simple scan tells Versatrac where your document is going.

A complete system

Simpler is better. And Versatrac is the best. Easy to use, yet solid. Versatrac combines bar codes, IBM-compatible PCs, and powerful software in a straight-forward, uncluttered system that meets your needs.

Bar codes enable Versatrac to locate millions of files or documents.

A superior management tool

Versatrac helps you manage paperwork effectively. You can do away with cumbersome outcards and manual logs. You can increase staff productivity, eliminate time wasted searching for misplaced paperwork, and dramatically reduce errors.

Versatrac delegates responsibility to the individual closest to the work—where it belongs. Supervisors are freed to deal with exceptions. Morale increases, along with accountability and quality.

Pays for itself

Versatrac easily pays for itself within a year.

The system cuts costs because it:

- eliminates lost files
- reduces searches for misplaced files
- increases accuracy
- decreases document processing time
- runs on industry-standard PC's.

Versatrac also boosts productivity since it:

- eliminates manual logging
- increases data entry speed
- measures on-time performance
- improves customer response time
- expands processing capacity.

Solid experience

Seven years on the job have taught us how to take advantage of bar code technology in the office. We understand your problems and we know how to solve them. We're eager to share that information with you.

Take a free look!

You owe it to yourself to see how Versatrac can help your organization.

Contact us now to request your free Versatrac demonstration disk.

Review the disk privately at your own convenience—and with no obligation, of course. It takes just a few minutes.

Then you'll be on the way to manageable paperflow, improved customer service, and the end of lost files.

SPECIFICATIONS

Computer

- 386 or 386SX IBM compatible
- 640K RAM
- MS-DOS 3.1 or higher
- VGA color monitor recommended
- Math coprocessor
- Tape back-up
- 2400 baud modem
- HP LaserJet or compatible printer

Bar Code Readers

- Intermec 9510 on-line reader
- Intermec 9710 wedge reader
- Intermec 9191 satellite scanner
- Videx TimeWand portable reader
- Symbol DataWand portable reader

Connectivity

- Networks: Novell, 3Com, Banyan, Microsoft
- Data import/export: ASCII, dBase, others

Capacity

- 2,000,000+ records per database
- 250+ fields per record
- Up to 32,000 characters per field, variable length
- 50+ separate databases
- 300+ simultaneous on-line bar code readers
- Database access time independent of file size

Applications

- Real-time paperwork tracking
- Document, file, volume and/or box level
- Management of active records
- Workflow management

Reporting

- Notification of overdue items
- Automated file requests
- User-defined reports
- Productivity reports
- Workflow monitoring
- Management by exception

Design

- User-friendly
- CUA-compliant pull-down menus
- Point-and-shoot commands
- Easy to learn
- Flexible
- Complete on-line help
- Simple to customize field names, number of fields, reports
